

PROGRESS CHECK: 2nd Progress Report for Final Project Video Presentation

Your Links: Please put the link to your Video and the link to your Code Repository (GitHub/Drive) right at the very top of the page.

Link: <https://drive.google.com/file/d/1JqWuR82iA75DIDBpA-cCvGF9P0yQ6QZC/view?usp=sharing>

Current Status: Give me an honest estimate of your completion percentage (e.g., "We're about 60% done").

Project Completion: 80 - 85%

The portfolio website is mostly functional and visually organized. The main sections have been completed, including navigation, profile, about, gallery, education, skills, achievements, hobbies, contact information, and a contact form. Some final improvements such as responsive design testing, form functionality, animations, and additional styling are still in progress.

What's New: List the specific features or modules you've successfully built since our first check-in, and give me a quick update on your backend/database setup.

Improved Navigation Bar

- Organized menu links
- Added Skills section to the navigation

Enhanced About Me Section

- Added more personal information
- Included interests and technology-related goals

Gallery Improvements

- Organized images using a gallery container
- Improved structure for easier styling

New Skills Section

- HTML
- Photoshop
- Java

Achievements Section Updated

- Cleaner layout
- Better image organization

Hobbies Section Improved

- Added videos for hobbies
- Organized media using containers

Contact Section Enhanced

- Added Font Awesome icons
- Facebook link
- Instagram link
- Email display

Contact Form Added

- Name field
- Email field
- Message textarea

- Send Message button

Footer Added

- Copyright information
- Professional website ending

(Backend / Database setup)

Currently, the project is a front-end portfolio website developed using:

- HTML5
- CSS3
- JavaScript (basic setup)

At this stage:

- No database has been implemented yet.
- No backend server has been connected.

Future plans include:

- Connecting the contact form to a backend service.
- Adding database storage for messages.
- Implementing form validation using JavaScript.

UI Screenshots: Drop in 3 to 5 clear pictures of your current user interface.

Individual submission the PDF.
